Lil

Picture I'm talking about is the one of Lou. It came up large after I down loaded it, so I clicked the right side of the mouse and a box comes up that says edit which allows to edit picture as to size and lighter or darker among other things. Surprised you dont have that on your pc.

Perlmutter is right Meshenberg I think. Dont know Mae/s last name. I think they were Mom's cousins some where along the line.

Pain pills are oxycodone , probably in the codine family.

When a picture comes up in down load for Point your arrow at the picture with your RIGHT CLICKER to edit the pic. If it dose come up with a box point your left clicker to any of the little icons to see what you can do with the pic to change it to your liking. Try it.

Love, Irv
